NEXO LUCE

Nexo Luce is a high end manufacturer of lighting fixtures specialised in delivering large scale, turnkey solutions. The company offers a complete range of lighting products for indoor decorative and technical applications, and outdoor architectural landscape and urban use. These are manufactured and assembled at the Nexo Luce factory in Cavriana, Italy. The company specialises in full turnkey solutions for high end buildings and projects such as hotels, residential developments, malls and other commercial projects.

New on the market

NEXO LUCE has recently launched a new design collection called Oxen. The collection features contemporary, elegant design and uses materials such as blown glass, brass, and steel. It is inspired by the Bauhaus school of design and the eclecticism of the 1950s and 1960s, centring on clean, geometric forms; balanced visual composition; and the colour scheme of copper, antique bronze, satin gold, and minimalist black and white.

REYNARD LIGHTING

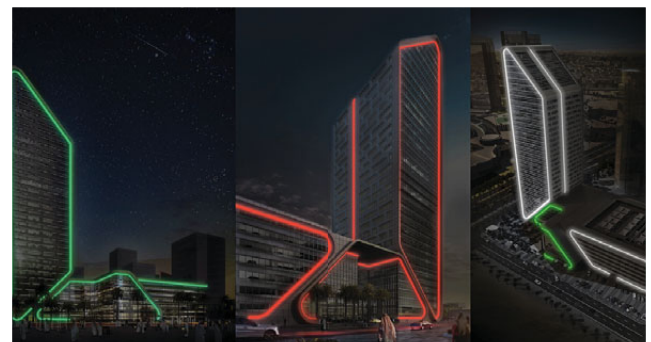

Reynard Lighting has been present in the UAE for more than a decade; with almost 25 years of international experience in professional design and supply of lighting and controls.

Among the projects it has worked on are the Black & White engineering offices, Dubai (Sustainable Project of the Year winner at the Light Middle East Awards 2016); Four Seasons Hotel Abu Dhabi at Al Maryah Island; Office of the Future, Dubai (the world's first 3D-printed and fully functional office); a 35-storey, five-star hotel complex and Al Ghurair Shopping Mall, Dubai (complete LED refurbishment delivering more than 50% energy saving). Currently, it is working on the world's largest medical facility and children's hospital projects in the Middle East.

"Our approach is to exceed the demands of our client's expectations while considering the interiors and landscape vista, integrating both product and aesthetics. Each project design is unique and treated with a true independent approach to deliver a fit-for-purpose, value-for money, technically robust and sustainable solution," says Greg Scott, design director at Reynard Lighting. Reynard Lighting works alongside end clients, project managers, MEP and interior design consultants, as well as other lighting designers. Adding value by integrating all aspects of the project – design, engineering, efficiency, performance and value for money – Reynard Lighting's design team ensures that all of its projects remain as specified.
